Sparingly use of resources

The energy supply of the seminar center and peace culture village will be renewable and self-sufficient. Water is collected and used repeatedly and efficiently. Nutrients remain in the cycle.

The economical use of resources can serve as a model for (climate protection) projects worldwide.

Future means autonomy

With your support, the next steps towards the realization of the big vision can be taken.

Hope for a whole region

OTEPIC is already bringing hope and perspective to all regions of Kenya and East Africa.

Or visit us!

Visit us in Kenya and get to know the project, our team, our community and our hospitality.

Karibu!
A warm welcome!

FUTURE

Orphanage Tabasamu

In the orphanage Tabasamu (swahili for "smile") are living 16 orphans. OTEPIC gives them a better life away from the township, provides them and benefits their education.

Teamleader Milicent Anyango won 2018 the Abundant Earth Youth Prize of the Permaculture Magazine for her dedication.

We are always **thankful to obtain donations** for the OTEPIC orphans! Your **support is used** for **education**, clothes, toys, household objects and nourishment.

It is also possible to **sponsor** an orphan.

ORPHANAGE

Upendo/Sabwani garden - OTEPIC Centre

Four permaculture gardens

Four permaculture gardens are managed sustainably by the OTEPIC community.

Trees provide shade, bananas, lettuce, herbs and vegetables are harvested, mushrooms and aloe vera thrive, with biogas is cooked and rain water is collected in ponds, workshops are offered, ...

Amani garden (Peace garden)

Water for surrounding villages

The water in the rivers is contaminated with pathogens and chemicals.

Two renewable groundwater pumps, pump clean, crystal-clear drinking water, free of charge. The water is used for the gardens and supplies daily 3,000 people.

A cool vision

Philip Munyasia grew up in the township "Mitume" in Kitale, a town in western Kenya, where he still lives today.

He already formulated his big vision of the food revolution as a teenager:

Sustainable self-nourishment, knowledge transfer and living in peace and harmony with nature.

His purposefulness gave him the opportunity to study in the USA and Portugal.

He returned to Kenya and founded OTEPIC in 2008.

OTEPIC,
„Organic Technology
Extension and Promotion of
Initiative Centre" is with **five Kenyan
board members** registered as
„Community Based Organization" (CBO).
